

SEED TO YIELD

OBSERVATIONS FROM THE WEEK OF: SEPTEMBER 26, 2022

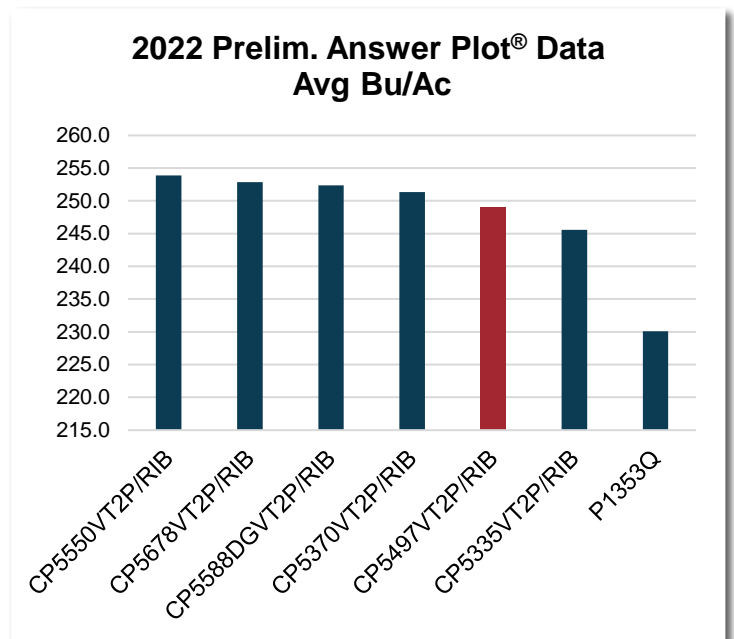

CP5497VT2P *VTDoublePRO*

- Widely adapted hybrid that travels east to west within 115 RM zone, but also has ability to move south
- High response to population enabling pops to be pushed in higher yield environments, but semi-flex ear does allow flexibility in population on medium productive soils
- High response to fungicide score with very little yield differences in V10 and R1 timing under moderate nitrogen
 - In high yield environments with high nitrogen applications rates, R1 provided the highest ROI potential
- Medium plant height and ear placement resulted in a very attractive end of season appearance
- Recommend planting on rotated acre, not a corn behind corn product
