

Altipro™

Fungicide
Azoxystrobin – 11 and Prothioconazole - 3

Advanced Broad-Spectrum Disease Control

With two heavy-hitting modes of action, Altipro™ fungicide provides preventative and curative defense against a wide range of diseases in crops including corn, soybeans, and peanuts. Systemic control also helps provide sustainable, long-lasting protection.

FEATURES AND BENEFITS

- Formulated with two modes of action, azoxystrobin and prothioconazole, to deliver long-lasting residual control for extended performance.
- Promotes healthy, dark green leaves for improved photosynthesis and increased plant stress tolerance to optimize yield potential.
- Progressive movement of Altipro fungicide maximizes and extends protection. It works by diffusing in and on the waxy surface of the plant and then expands protection by moving via surface moisture. Systemic transport throughout the plant tissue enhances coverage.

Helps protect crop potential from yield-robbing diseases

Key diseases controlled or suppressed		
Corn		
Anthracnose Leaf Blight	Eye Spot	Gray Leaf Spot
Northern Corn Leaf Blight	Northern Corn Leaf Spot	Tar Spot
Common and Southern Rust	Southern Corn Leaf Blight	
Soybean		
Alternaria Leaf Spot	Anthracnose	Asian Soybean Rust
Septoria Brown Spot	Cercospora Blight	Frogeye Leaf Spot
Pod and Stem Blight	Powdery Mildew	Rhizoctonia Aerial Blight

USE RATE†

Varies based on many application factors. See label for details.

ACTIVE INGREDIENTS†

16.00%: Prothioconazole
13.70%: Azoxystrobin

PACKAGING

2 x 2.5 gallon jugs
250 gallon totes
Bulk

Pair with MasterLock® adjuvant for maximum effectiveness

When you invest in a fungicide application, ensure you're maximizing its disease control potential by adding MasterLock® adjuvant to the tank. WinField® United Answer Plot® data has shown a 5.7-bushel-per-acre average yield increase in corn when MasterLock adjuvant is added to the spray tank along with a fungicide, compared to using a fungicide alone.*
