

Brash[®]

By WINFIELD

Effective weed control for cropland and non-crop areas

Broad-Spectrum Broadleaf Weed Control

Brash[®] herbicide provides dependable postemergent control of actively growing broadleaf weeds. With a combination of dicamba and 2,4-D amine active ingredients, Brash[®] herbicide effectively controls emerged broadleaf weeds prior to and after planting in crop and non-crop areas.

Brash[®] herbicide is labeled for use in the following applications:

- Between crop production (fallow systems, postharvest, crop stubble, set-aside)
- CRP land
- General farmstead (including non-crop weed and brush control)
- Grass (including hay and silage)
- Pasture
- Rangeland
- Rights of way (roadways, utilities, railroads, highways, pipelines)
- Sorghum
- Sugarcane
- Wheat

Ingredients

Dimethylamine salt of dicamba	12.4%
Dimethylamine salt of 2,4-dichlorophenoxyacetic acid	35.7%
Inert ingredients	51.9%
TOTAL	100%

Brash[®] herbicide contains 1 pound dicamba acid and 2.87 pounds 2,4-D amine acid per gallon.

Weeds Controlled

Brash[®] herbicide provides control on more than 100 of the toughest broadleaf weeds and brush, including many trees, vines, annuals, and biennial and perennial broadleaf species. See the product label for a complete list of covered weeds.

HERBICIDE
BROADLEAF HERBICIDE

Application Information

Recommended use rates range from 0.5 to 5.6 pints per acre. Application rates vary by use, weed type and growth stage. See the product label for specific rates and application timing. Brash® herbicide may be applied in fluid fertilizers preplant or preemergence and postemergence (pasture, hay or wheat).

Adjuvant Use

Liquid fertilizers and adjuvants, such as Preference®, a nonionic surfactant, and Superb® HC, a crop oil concentrate, may be used with Brash® herbicide for improved weed control. Crop oil concentrates and fertilizers are generally recommended only in burndown or non-crop applications. See the product label for adjuvant recommendations and restrictions.

To lock in spray coverage or deposition and lock out drift, include InterLock® adjuvant.
