

WinFieldTM Malathion 5

INSECTICIDE
BROAD-SPECTRUM INSECTICIDE

Insecticide for use in the field

Product Use

Malathion 5 insecticide is used to control insects in the field, including aphids, spider mites, armyworms, grasshoppers, Japanese beetles, leafhoppers, flies, mosquitos and a variety of other insects. Malathion 5 may be applied by ground or air and is labeled for ULV applications in many crops. To lock in deposition or spray coverage and lock out drift, include InterLock[®] or MasterLock[®] adjuvants.

Application Rates

Field crops, vegetables, fruit, forages and tree crops:
Use rate depends on target pest and labeled crop.
See label for full use rate directions.
