

Prime Oil®

By WINFIELD

Control tough weeds with Prime Oil® adjuvant in the tank

Improve Product Penetration

Prime Oil® adjuvant is a premium crop oil concentrate, consisting of a blend of special nonionic surfactants with phytobland oil. As a crop oil concentrate, Prime Oil® adjuvant breaks down waxy cuticles of leaves to improve product penetration and provides uniform coverage of leaf surfaces. Prime Oil® adjuvant is compatible with a broad range of herbicides, insecticides, fungicides, fertilizers and micronutrients.

Mixing and Application

Ground:

1 to 4 pints of Prime Oil® adjuvant in 20 to 100 gallons of water. See crop protection product label for specific recommendations. Do not exceed 2.5% volume to volume.

Aerial:

2 to 8 fluid ounces per acre. Follow recommendations on pesticide label for minimum water volume per acre or if higher rates are required.

Add Prime Oil® adjuvant to the tank after adding pesticides and/or fertilizers.

To lock in spray coverage or deposition and lock out drift, include InterLock® adjuvant.

Ingredients

Phytobland paraffinic oil	83%
Alkylphenol ethoxylate and tall fatty acids	15.47%
Constituents ineffective as spray adjuvants	1.53%
TOTAL	100%
