

# InterLock®

By WINFIELD UNITED

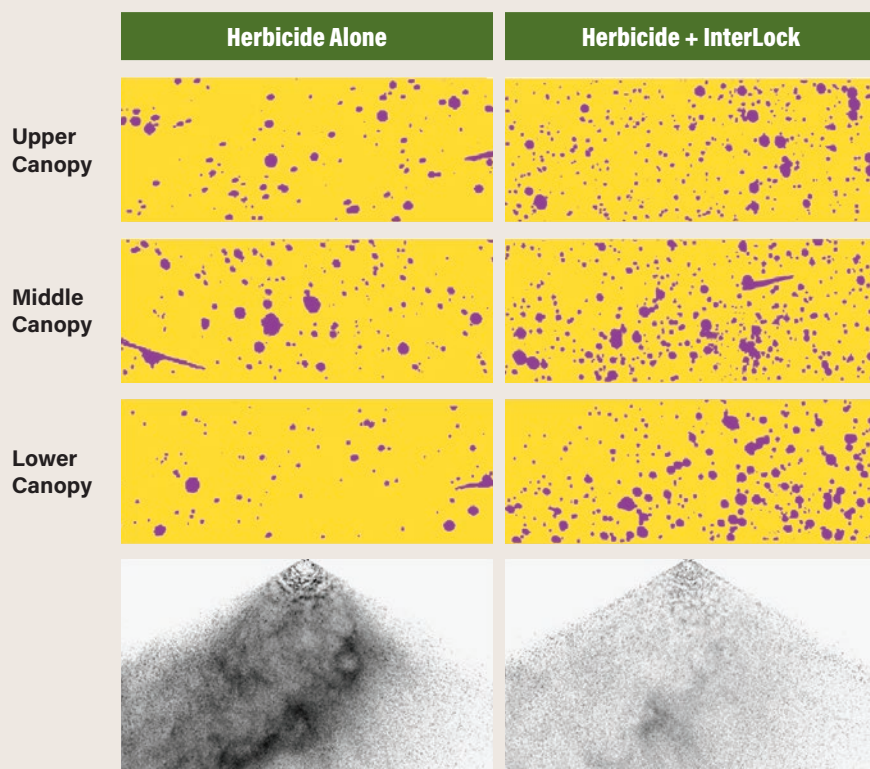

InterLock®, a utility modifier adjuvant, is a drift control agent and deposition aid that improves spray pattern and reduces spray drift. InterLock works effectively with herbicides, fungicides, insecticides and desiccants.

## FEATURES & BENEFITS

- Improves deposition of the spray application onto the intended target.
- Reduces fine particles in spray pattern without thickening the spray or increasing the number of large undesirable sized droplets.
- Improves spray droplet coverage and reduces drift.
- For use with both ground and aerial applications.

### VERSATILE DRIFT REDUCTION AND DEPOSITION AGENT

#### COMMON USE RATE

80-120 mL/acre  
(80-120 acres/jug)

#### APPLICATION GUIDE

Multiple crop stages

#### PACKAGING

2 x 10 L jugs/case  
450 L tote

#### ACTIVE INGREDIENT

Blend of drift control  
and deposition agents

#### PRODUCT GROUP

Utility modifier

InterLock is typically applied at 100 acres/jug. Always add InterLock to the spray tank last.
